

VERBB

Quick Reference Card

Circuit Editor Symbols

	resistor
	capacitor
	inductor
	voltage source
	dependent voltage source
	current source
	dependent current source

Circuit Editor Commands

EDITB	Edit Branch
DELB	Delete Branch
MOVE	Move End-Point
NOI	Node Of Interest
GND	Ground
EVAL	Evaluate Circuit
QUIT	Quit

Circuit Editor Evaluation Errors

(The manual's appendix has more information)

- 1 There are two sources in one essential branch.
- 2 There are components through which no current can flow.
- 3 The circuit is not a circuit or it is indeterminate.
- 4 A source is not loaded or is directly shorted.
- 5 There is more than one independent source.
- 6 There is no independent source.
- 7 There is a resistor with a zero value.
- 8 There is a capacitor with a zero value.
- 9 There is an inductor with a zero value.
- 10 There is a dependent source that has no specified dependency.
- 11 There is a dependent source that has an erroneous dependency.
- 12 There is a dependent source that has an erroneous dependency equation.
