

Important Installation and Operation Instructions

1. When installing the Connectivity Pack software, be sure to specify a subdirectory, such as C:\CPACK or D:\subdirectory. The Connectivity Pack will default to C:\CPACK unless otherwise specified. Never specify only C:\ or D:\.
2. Do not run DOS Connect (DC95.EXE) from within the APP95.EXE application. Always exit APP95.EXE before running DC95.EXE.
3. **If you're using DOS 5.0:** To correctly install the Connectivity Pack software, move to the drive containing Disk 1 of the Connectivity Pack. Then, at the DOS prompt, type LOADFIX INSTALL and press **ENTER**. (The LOADFIX command enables the install program to work properly with DOS 5.0.)
